# casehistory

*Architectural Lighting*

Platek Light is engaged in manufacturing lights for the architectural lighting of outdoor areas and site amenities.

The "Case History" brochure contains numerous photos showing installations enhanced by Platek lighting.

The schematic project drawings, with relative operative key, are designed to enable professionals to quickly read and understand the lighting concepts used.

The definition of light positioning is intended to help in selecting products and to be an example for any customer demos.

The project specifications also show the total power ratings of the appliances together with the total energy consumption of each.

# Strasbourg's architectural heritage lit up by Platek Light

Strasbourg, France

Strasbourg, the capital of the Alsace region, has always been an important European crossroads ever since ancient times, as its Germanic and Latin names imply: 'Strate Burgum' ('city at the crossroads'). Today, Strasbourg is a cosmopolitan city, sitting halfway between Paris and Prague.

The permanent seat of the European Parliament, the Council of Europe and the European Court of Human Rights, Strasbourg has been the favoured abode of many a famous figure in history, such as Gutenberg, Calvin, Goethe, De Lisle and Pasteur, among others. A city of breathtaking beauty, its historic centre was classified a UNESCO World Heritage site in 1988.

As part of a project to beautify the architectural heritage in the heart of the city, the Urban Community of Strasbourg commissioned Platek Light to provide the lighting.

Indeed, Platek Light is responsible for illuminating the most important sights along the banks of the River Ill, which flows through the city centre and the characteristic Petite France district. Sights include the late 17th-century Barrage Vauban (also known as the Grande Ecluse), a weir that once formed part of the city defences; the Pont Sainte Madeleine and Pont Saint-Martin fortified bridges (known jointly as the Ponts des murs couverts); the Palais des Rohan, a residential palace belonging to the influential Rohan family, four members of which consecutively held

the office of Bishop of Strasbourg diocese throughout the 18th Century; and the Ancienne Douane (old customs-house).

The River Ill frames and reflects the facades of these buildings, especially at night, thanks to the bright lights and colours provided by Platek Light. An awesome sight, enhancing the beauty of the city and adding a sparkle to Strasbourg by night.

The products Platek Light chose to use for this ambitious challenge belong to the Tetra range: TETRA 75 Applique and TETRA 140 Applique, TETRA CORNICHE 360, 1200 MINI up-light and floodlight, MINI CORNICHE Applique, MICRO SPRING floodlight, MICRTO STEEL floodlight and SPRING floodlight.

# House of Music at Saint - Cyr sur Loire

Saint - Cyr sur Loire, France

At the centre of the lighting project of the House of Music at Saint-Cyr-sur-Loire is the complete RGB LED system, which makes this an extremely high-standard installation.

The lights are perfectly integrated in the complex, and are hidden from sight, thereby further enhancing the architectural styles and the end effect, creating strongly suggestive atmospheres. The colour mix is perfect and the result is one very hard to obtain using side-lighting luminaires.

The control of the light scenarios - the colours of which can vary according to the occasion being celebrated or special events - is by means of a remote WEB line: in this simple but very innovative way, an emotional RGB light can be created, which becomes an ornament of the building but at the same time, also a visual attraction for passers-by.

# Logistics center in Freiburg

Frinurgo, Germania

The front section of the Alexander Bürkle GmbH & Co. KG logistics centre of Freiburg consists of four floors where the sales and administrative offices are located; on the ground floor is the goods loading/unloading area, while the warehouse is situated on the rear.

The horizontal blinds, the masonry abutments above the main entrance and on the right side form a “play” surface for the colour change of the Tetra Carniche 360 and Terta Lineare 900 integrated RGB LED outdoor lighting appliances: multipurpose and decorative outdoor lamps, distinguished by radiating light beams in three different colours. In downlight, Tetra Carniche 360 lights up the window transoms, while in uplight, the Tetra Lineare 900 lights up the masonry abutments. Colour change matches the company’s Corporate Identity and proceeds at a slow speed.

The excellent view of the goods loading/unloading ramps, of the entrance stairs and of the access ramps for the disabled is instead provided by the Tetra Portici wall lamp: an armoured lamp suitable for both indoors and outdoors, able to emit diffused light, both above and below.

The Tetra 200 Up-/Downlights have been used for the warehouse because, thanks to their extensive downward emission, they provide a radiating light with an almost

stage effect on the façade, creating both excellent decorative lighting and functional surround lighting. The rhythm of the façades of the warehouse – which extends over 2,600 sq m – is provided above all by the decorative gables: such rhythm is captured and underscored by the Tetra 200 uplight outdoor lamps.

# Light restyling along the streets of Comacchio

City of Comacchio, Italy

The magic setting of the canals of Comacchio is made even more suggestive by the project managed by Architect, Giordana Arcesilai and which makes use of specially-designed Platek Light light appliances.

The products are custom-made, to integrate perfectly in the context of streets and canals. From the undergutters emerges a warm light, produced by the selected light source: the Philips COSMO WHITE lamp also features innovative technology offering good three-dimensional perception, without altering the context too much, and is therefore particularly suited for site amenities and lighting up faces and colours.

To make the project even more suggestive, in some points such as the IN/OUT accesses to the canal harbour, the decision was taken to use appliances with blue LED light source. This is a colour that integrates with the night without appearing unnatural, and is perceived as relaxing and not invasive.

The canals of the Emilia town are instead warmed by the special version of the TETRA PORTICI wall lamp, which has proved to be very successful.

# Villa lighting ( Sardinia )

Italy

The splendid grounds of this villa in San Teodoro are made even more appealing by the expressly chosen outdoor lighting: the light sources do in fact create paths and highlight the buildings, while always remaining in line with the elegance of the villa.

The asymmetric 900 MICRO recessed wall light is used to create light sequences on the walls lining the paths and swimming pool; to light up the surrounding surfaces and walls on the other hand, the light beams are used of the 900 MICRO and 9-LED 1200 MINI models, both extra-strong lamps, in the bodies of which an extra empty space is provided for any water infiltrations.

Designed specifically for use in damp areas are the 1700 NETTUNO in bronze and 2600 ATLANTIQUE recessed lamps: IP68 like the other appliances (i.e., totally resistant to the penetration of solid and powder bodies, and protected against permanent water immersion at a depth of 1 metre), they are also rustproof and therefore perfect for use under water.

For side-lighting the columns and the façade of the villa, the TETRA 75 wall lamps were chosen, as these provide a highly intense, diffused light source.

# Residential lighting in Franciacorta

Brescia, Italy

Platek Light enhances the outdoor environments of this private villa in Monticelli: to light up the exteriors, whether columns, perimeter or other walls, appliances have been specifically selected that blend in with the architecture, making it stand out.

The chosen light sources are all of the LED type, thus ensuring low energy consumption. The power of the beams is in any case guaranteed and adapted to the individual surfaces: the MONACO 100 MONO and BIEMISSIONE wall effects highlight the shapes of the villa, while the promenade 40 units ensure excellent lighting of the access areas.

# Light atmospheres at the Vecchia Lugana restaurant of Sirmione ( Lake Garda )

Brescia, Italy

The style characterizing the Vecchia Lugana in Sirmione is the main theme of the lighting project of this gourmet restaurant overlooking Lake Garda: the installed bronze units were chosen because they were in line with the environment and become all one with the atmospheres of the premises.

Bronze was preferred because it is strong, lasts forever and is able to offer products distinguished by modern lighting in an ancient-style body.

All the lights are hidden or recessed in the ground, except for the spotlights, which stand out on the bridge and light up the entrance to the restaurant from the lake, creating magic atmospheres.

# Residential lighting at Garda Lake

Brescia, Italy

Platek Light enhances the outdoor areas of this private villa on Lake Garda.

To light up the outdoor structures - columns, perimeter walls or walls, etc., - appliances are specifically used which move with the architecture, making it stand out.

The selected light sources are all LED, so energy consumption is low.

The power of the beams is in any case guaranteed and suitable for the individual surfaces: the effects on the wall of the ONE wall lamp underscore the geometries of the villa, while MILANO 2 provides perfect lighting for the villa entrance areas.

The ONE post lamps, in line with the aesthetics of the wall lamp, delimit the garden perimeter and ensure correct lighting.
