T4 collection

lighting post urban lighting

A family of poles by the rationalist design.

T4 is a small architectural lighting structure: the body with a square section is composed of two separate volumes by two uprights supporting the light source. At power-on, this ephemeral structure

disappears from sight, transforming into two beams of geometrical light which creates a suggestive alternation of light and shadow on the floor.

T4 is an efficient tool for the lighting of open spaces, pedestrian areas and urban zones.
